4 Key Advantages of CosyPanels

1 Cooler in the summer

Our CosyPanels are precision manufactured from UPVC with UV protection to remove 100% of unwanted glare, coupled with high-performance insulation. This removes the extreme heat which makes the conservatory unusable.

3 Quieter in bad weather

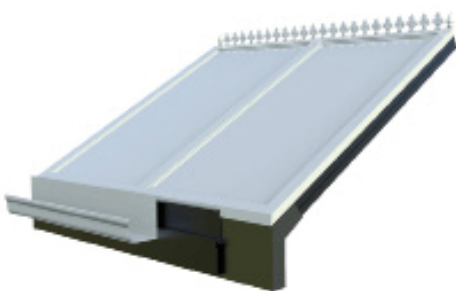

CosyPanels are exclusively manufactured with high-tech insulation. Our conservatory roof panels will help you relax in your room, without distraction. The thermal insulation within each CosyPanel helps reduce noise from rain when compared with polycarbonate. The conservatory roof is precision measured for each CosyPanel, to provide a seamless integration.

2 Warmer in the winter

CosyPanels can be manufactured to fit your existing framework. The high-density, waterproof, Polyurethane foam insulation makes CosyPanels a preferred alternative to a polycarbonate or glass roof replacement. When you decide to heat your conservatory you can have comfort in the knowledge that the heat stays in, keeping your conservatory nice and cosy.

4 Energy efficient

CosyPanels provide much higher levels of insulation than glass or polycarbonate. They are up to eight times more efficient than your existing roof at keeping the heat in. With our insulated conservatory roof panels installed, your conservatory will become a more usable room all year round. The heat you put into it will stay, rather than escaping straight through the roof.

Case Studies

Real-life stories. Here's what we did

Mr & Mrs Allen

Mr and Mrs Allen contacted us to discuss roofing options for their conservatory, which had a dated polycarbonate roof of about 12 years old. The solution provided was CosyPanels to replace the roof with a high-tech insulated German Conservatory Roofing System. This would not only replace the roof but would also benefit the use of the conservatory as the Allens were finding it too hot or too cold making the conservatory at times unusable. The result was a new roof with insulation which solved the temperature control issues. The clients were delighted with the result.

Mr & Mrs Mercer

Due to a couple of leaks and discolouration of the roof we were contacted to supply a replacement alternative roof due to the inherent issues Mr and Mrs Mercer faced with polycarbonate. They did not want to continue with the issues they had with noise and temperature control. CosyPanels provided the solution at a cost comparative to polycarbonate which made the decision easy. This solution gave a fresh new look to the conservatory which the clients love and has given the conservatory a new lease of life.

Mr & Mrs Walter

The polycarbonate roof became a harvest for bugs and moisture. Over the years the polycarbonate was effective at keeping the elements out, but was a real problem at providing a stable climate controlled space. We were contacted to demonstrate our innovative product, which now replaces this outdated technology. We installed this solution in just one day and the results made a huge difference to the Walters lifestyle and living environment.
